PROFILE

Results-driven Software Engineer with a proven track record of migrating legacy applications, reducing expenses, and leading impactful projects that drive revenue. I'm looking for a new role where I can utilize my communication, creative thinking, and technical skills by creating solutions in a collaborative environment.

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Go, JavaScript, HTML, CSS, XAML, Rego
 - **Databases:** PostgreSQL, MySQL, Microsoft SQL Server, DynamoDB, Redis, Athena
 - **Cloud & Infrastructure:** AWS (S3, SNS, SQS, IAM, RDS, EKS, EC2), Docker, Terraform, Kubernetes, Helm
 - **Backend Development & Tooling:** gRPC, REST, Protobuf, .NET, Entity Framework, Xamarin, Open Policy Agent (OPA), Telerik, Datadog, Postman, Maven, GitHub Actions, CI/CD, SSIS
-

PROFESSIONAL EXPERIENCE

DemandScience (formerly Terminus)

Software Engineer II

Software Engineer

Danvers, MA (Remote)

Nov 2023 - Feb 2025

Jan 2022 - Nov 2023

- Refactored a Salesforce ingestion ETL pipeline from Go to Java, processing 1 TB of customer CRM data daily into S3 and MySQL. The refactor **reduced processing time by 40%**.
- Led an AWS cost reduction effort to neutralize high spend resources by adopting S3 lifecycle policies, compression, and eliminating orphaned resources, **saving \$12,000 annually**.
- Delivered a segmentation platform with Java, S3, Athena, and PostgreSQL to automate audience targeting, removing manual workflows and **accelerating ad campaign launch times by 66%**.
- Architected and implemented an export service that delivered accounts, contacts, and leads to customer CRMs via third-party REST APIs, **generating \$54,000 in recurring revenue**.
- Devised Redis caching layers for MySQL-backed business reports, optimizing over 100K queries a day and **reducing average latency by 90%**.
- Shipped robust APIs to power customizable business reports using Java, gRPC, Protobuf, and SQL, handling over **1 million daily requests with sub-100ms response times**.
- Centralized access control by replacing redundant JWT authorize endpoints with Open Policy Agent and Rego policies, **eliminating code duplication by 10%**.
- Designed and implemented event-driven workflows with SNS and SQS to power Terminus' data ecosystem, handling over **300K events per day** with fault tolerance.
- Instrumented Datadog dashboards and monitors to enable **real-time system observability**, shortening mean time to resolution by 1 hour per incident.

- Authored reusable Java libraries for AWS integrations to standard SDK usage across 12 microservices, **accelerating team delivery timelines**.
- Mentored junior engineers through weekly 1:1s and pair programming, **increasing team velocity**.
- Supported production health as part of on-call rotation while balancing sprint tickets, triaging and **resolving high-priority bugs**.

EVAPCO, Inc.

Software Engineer

Taneytown, MD

Sept 2016 - Jan 2022

- Coordinated a cross-functional effort leading three developers to introduce the eco-Air product group by building new data pipelines and UI workflows, **boosting sales by \$540K annually**.
- Migrated a legacy WinForms monolith to WPF, implementing async/await patterns, reducing UI freezes and shortening end-to-end workflow by 70%, contributing to a **\$6M annual revenue increase**.
- Implemented an intelligent rule engine for accessorizing product models with C# and .NET, **reducing profit loss by \$70,000 annually**.
- Led test driven development adoption with Moq and NUnit, boasting **95% code coverage** for an order management application.
- Automated the generation of customizable technical documents (PDF, Excel, CSV), **saving hours of manual effort** each week across departments.
- Built ETL workflows using SSIS to **ingest millions of new products** from Excel into SQL Server, **eliminating manual uploads**.
- Implemented a step-by-step guided selection interface that helped users find compatible HVAC products faster, **improving task completion rate by 2x**.
- Redesigned UI/UX with sleek Telerik controls and MVVM data binding, delivering **real-time data visualization** while also improving code modularity.
- **Supervised** two junior developers ensuring on-time delivery and **resolving blockers** as their go-to technical lead.

EDUCATION

McDaniel College

Sep 2012 - May 2016

- Bachelor of Arts Degree. Computer Science Major, Art History Minor.
- Relevant Coursework: Java Programming, C++ Game Development, Algorithms, Data Structures, Concurrency, Computer Architecture, Discrete Mathematics, Linear Algebra, Cybersecurity.

PROJECTS

- Developed an iOS art history quiz application with Swift, SQLite and MVC principles to enhance learning through gamification.
- Currently building a portfolio website to showcase projects, utilizing MongoDB, ExpressJS, ReactJS, and NodeJS.
